

Writeup

Step 1 :-

After downloading file , I found that magic bits of file is missing so I added those missing magic bits, after opening the image it gives a hint.

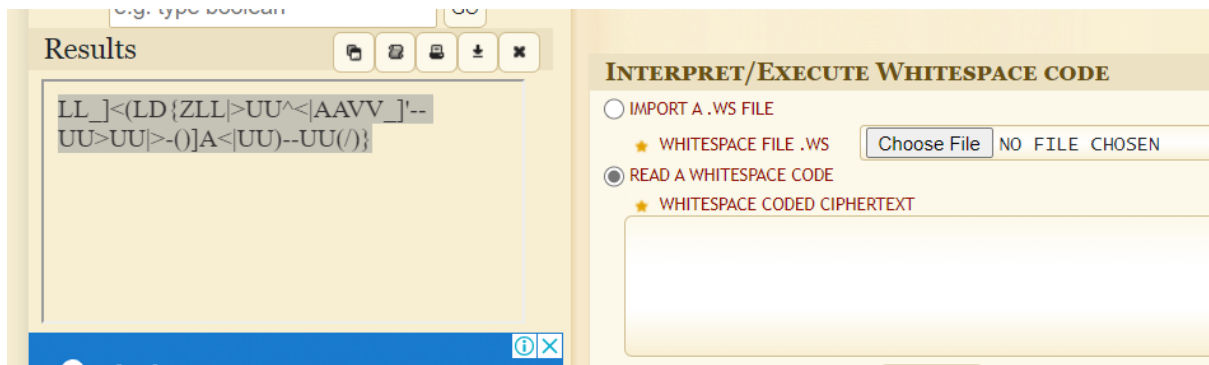

Step 2:-

After few tries I used steghide to extract the hidden file which is a text file named flag.txt.

Step 3:-

Opening the file , gives nothing but while selecting all the file highlights the whitespaces which is a cipher. So decoding the white space cipher gives some weird string.

Step 4 :-

Remember the hint on the image, the first letter of each word is captail which reminds the NULL Cipher (reference [Null Cipher - GeeksforGeeks](#)) from which we can derive LSPK90, so searching for LSPK90 gives a cipher name LSPK90, decrypting it gives the flag.

Website :-

[LSPK90 CW - Leet Speak 90° Clockwise Writing - Decoder, Translator \(dcode.fr\)](https://www.dcode.fr/lspk90-cw-leet-speak-90-degrees-clockwise)
